

CNM Diagnostic — Launch Checklist & Test Plan

Target launch: This month | **Traffic:** Paid (Meta/Google) | **Budget:** AED 5K-20K

Recommendation: Launch at AED 5K first. Scale to 20K only after Week 1 numbers confirm the funnel works.

Pre-Launch Test Matrix

Run every item below before spending a single dirham on ads.

Area	Test
Stage classification	Submit one canonical answer set per stage (1-6) — confirm correct stage returned
Boundaries	Test revenue answers immediately below/above every stage threshold (e.g., 49K vs 50K)
Contradictions	Run all 6 contradiction patterns from the scoring doc — confirm they flag for review, don't silently pass
Missing data	Submit with Q3 missing (should block), submit with Q25 missing (should flag <code>delivery_blocked</code>)
Dimension scoring	Test lowest (all 0s), highest (all 4s), and midpoint answers per dimension
Qualification bands	Confirm Priority / Nurture / Self-Serve all trigger correctly per stage + urgency combo
Report content	Generate one report per stage (6 total) — check genericity test passes, no placeholder text leaks through
Access versions	Confirm client report has NO advisor-only fields visible; confirm advisor URL isn't guessable from client URL pattern
Mobile layout	Full quiz flow on mobile — check dropdown/multi-select (Q21) renders correctly
Automations	Test duplicate Stripe submission (same submission_id) — confirm no duplicate report generated
Automations	Test delayed report generation — confirm "preparing" email fires, no timeout error shown to user
Delivery	Confirm report email lands (not spam), link works, correct recipient
Analytics	Confirm every event in Section 2 fires exactly once with correct submission_id
GHL fields	Confirm closer-only fields (band, urgency, objection, spend, team) never appear in any contact-facing email/SMS

Content Scoring Rubric (rate each stage report 1-10, revise anything below 8)

Diagnostic accuracy
 Answer-specificity (genericity test — min. 2 real inputs per paragraph)

- Practical usefulness
- Numerical/mechanism integrity (no fabricated numbers)
- Emotional relevance without hype
- Proof integrity (only verified case data used)
- Visual/PDF readability
- CTA legitimacy (matches qualification band)

Week 1 Soft-Launch Plan (AED 5K)

- Run ads to landing page only — small, controlled spend.
- Get to 50-100 quiz completions before evaluating.
- Track the KPI table below daily.
- Manually review first 10-15 reports personally before trusting the AI pipeline fully.
- Have your closer flag any call where the report clearly misdiagnosed the business — feed that back into prompt refinement.

Scale to AED 20K only if:

- Checkout → Quiz completion rate is healthy (no major drop-off)
- Report generation has near-zero failure rate
- At least a few Stage 4-6 leads have converted to booked calls
- No refund/complaint spike

KPI Targets to Set After Week 1 (don't guess these upfront)

Transition	Week 1 Actual	Notes
Landing → Checkout started	—	
Checkout → Purchase	—	Stripe drop-off here often reveals price/trust friction
Purchase → Quiz started	—	Should be near 100% if delivery email works
Quiz started → completed	—	Watch Q19-22 (systems block) for drop-off — longest, most personal questions
Report delivered → Booking (Stage 4-6)	—	This is your real funnel health metric
Booking → Call attended	—	
Call attended → Retainer signed	—	Ultimate ROI metric
Refund rate	—	Should stay near 0% at \$9

Production Readiness Note

This system has been designed and structurally tested against the matrix above, but has not run against real user traffic yet. Treat Week 1 as your actual validation — assumptions about report quality, question clarity, and stage distribution should be revisited once real answers come in, not assumed correct from design alone.
